	EU Type Examination n°: EPT 21 ATEX 4617 X
SYMBOL	MEANING
	The symbol reported complies with annex II of the regulation no. 765/2008 of the European parliament and of the council of 9 July 2008.
2575	Registered number of the Notified Body involved in the verification of the product.
	Specific symbol of ATEX directive 2014/34/EU, given in the annex II of the directive.
II	Group of the equipment. Group II refers to equipment for use not in mining.
1GD	Category of the equipment. In presence of potentially explosive atmospheres of gas (G) and/or dust (D) the category 1 is suitable for zone 0 and/or zone 20 application.
2D	Category of the equipment. In presence of potentially explosive atmospheres of dust (D) the category 2 is suitable for zone 21 application.
Ex ia	The type of electrical protection for the equipment is an intrinsic safety circuit.
Ex tb	Type of protection applicable to electrical equipment protected by an enclosure and surface temperature limitation for use in explosive dust atmospheres.
IIC	Group of gas for which the equipment is suitable.
IIIC	Group of dust for which the equipment is suitable.
T6...T4	Temperature class for Gas.
T85°C...T135°C	Maximum surface temperature for Dust.
T20085°C...T200135°C	Maximum surface temperature for Dust determined with a dust layer of 200mm.
Ga	Equipment protection level, equipment for explosive gas atmospheres, having a "very high" level of protection.
Da	Equipment protection level, equipment for explosive dust atmospheres, having a "very high" level of protection.
Db	Equipment protection level, equipment for explosive dust atmospheres, having an "high" level of protection.
-60°C ≤ Ta ≤ +X°C	Ambient temperature range.
Cert. n°: EPT 21 ATEX 4617 X	Certificate number issued by the notified body involved in the verify of annex III of Directive 2014/34/EU.

GB – READ THIS INSTRUCTION FIRST

READ THIS INSTRUCTION FIRST

To avoid serious or fatal personal injury or major property damage, read and follow all safety instruction in this manual. If you require additional instruction, please contact Rotork Instruments Italy.

SAVE THIS INSTRUCTION

⚠ WARNING!
Do not open in a gas/dust explosive atmosphere. Do not open when energized.

Safety instruction to hazardous area installation:

Model number covered: proximity switch box series SOLDO® BMC41A.

The BMC41 proximity switch series are proximity sensors magnetically activated, suitable for every type of position indication in industrial applications.

Projected and built according to directive ATEX 2014/34/EU and to the Potentially Explosive Atmospheres Regulations 2016 (S.I. 2016/1107) with reference to standards EN IEC 60079-0: 2018, EN 60079-11: 2012, EN 60079-31: 2014 and related standards IEC 60079-0: 2017, IEC 60079-11: 2011 and IEC 60079-31: 2013.

The following instructions apply to equipment covered by ATEX certificate number: EPT 21 ATEX 4617 X, IECEx certificate number: IECEx EUT 21.0007X and UKEx certificate number: CML 22UKEX2689X.

- ⚠ ATTENTION:**
- The SOLDO® proximity switch box series BMC41A may be used in an hazardous area with flammable gases, vapours, dust and mist, group IIC, IIIC protection mode Ex i and/or in an hazardous area with flammable dust and mist, group IIIC protection mode Ex tb with the temperature classes T4, T5, T6 and maximum surface temperature T85°C, T100°C T135°C.
 - The device can be marked according to the intrinsically safe type of protection (GAS and DUST) or alternatively according to the dust-tight type of protection (DUST), the markings are explained on page 8.
 - Suitably trained personnel shall carry out installation according with applicable code practice.
 - The user should not repair this equipment.
 - If the equipment is likely to come in to contact with aggressive substances, it is responsibility of the user to take suitable precautions that prevent it from being adversely affected, thus ensuring that the type of protection is not compromised. **Aggressive substances:** example Acids, liquids, gases can affected metal housing.
 - For ambient temperature below -10°C and above 70°C use field wiring suitable for both minimum and maximum ambient temperature. Use field wiring with operating temperature 7° upper than ambient temperature.
 - The user should guarantee the keeping of the safety characteristic of the device after maintenance.
 - A safety barrier shall be connected only to a circuit. So the SPDT limit switch shall be connected either normally closed or normally open, to avoid that two safety barrier are connected to the same common pole.
 - The user should provide suitable system to limit heating coming from valve. Don't install the equipment near heating/cooling source that could affect the service temperature.
 - Special precaution must be observed to avoid mechanical stresses like applied loads or impacts.
 - ELECTROSTATIC CHARGES** The metallic body of BMC41A switch series must be grounded through the specific terminal provided in the termination compartment.
In order to guarantee the earth bonding connection, the device must be installed in such a way as to guarantee the electrical contact of the body to earth by means of the mechanical connection of the M16 threaded stem of the device to the structure on which it shall be mounted or by using an equivalent reliable method as long as a minimum contact cross-section of 4 mm² is guaranteed.
Don't paint the metallic body.
The label is made by non-metallic material, so clean the proximity box with damp cloth to prevent built-up of electrostatic charges.
 - The proximity switch version marked according the intrinsic safety type of protection shall be powered only by means of intrinsically safe associated apparatus having suitable Category/EPL and output parameters Uo, Io, Po not exceeding the safety related electrical parameters included in this document. Associated apparatus can be zener barrier or a galvanically-isolated barrier. When a zener barrier is intended to be used as associated apparatus, particular attention must be paid in order to ensure that the ground connection used for the equipotential boundary of the equipment's body is at the same potential as the ground to which the associated equipment is connected; for more details, observe standards 60079-14 and 60079-25.

EU/UK DECLARATION OF CONFORMITY

Herewith we declare, under our sole responsibility, that the SOLDO® proximity switch series BMC41A.

Intrinsically safe, II 1GD, Ex ia IIC T6...T4 Ga, Ex ia IIIC T200**C Da, Ta -60°C +**C		
T gas class	*T dust class	**max ambient T
T4	T135	105 °C
T5	T95	55 °C
T6	T85	40 °C

The safety related electrical parameters applicable to the intrinsically safe equipment version are reported below:

Type 1	Type 2 (with end of line monitoring)
U _i = 30 V	U _i = 30 V
I _i = 100 mA	I _i = 100 mA
P _i = 750 mW	P _i = 300 mW

ESSENTIAL HEALTH AND SAFETY REQUIREMENTS

⚠ WARNING!
The equipment is designed to satisfy the requirements of Clause 1.2.7 of the Essential Health and Safety Requirements ANNEX II of directive 2014/34/EU.
Warns of hazard that MAY cause serious personal injury, death or major property damage.
HAZARDOUS VOLTAGE. Disconnect all power before servicing equipment.
CAUTION! Do not exceed the limit switch performance limitation. Exceeding the limitation may cause damage to the limit switch, actuator and valve.

1 INSTALLATION

- Bolt switches work on the principles of magnetic attraction between magnet and a magnetic target.
- Bolt switches can be installed and orientated in all directions.
- Bolt BMC41 series is provided with a magnetic target and all the models are provided with two stainless steel nuts to fix the body. The sensitivity of the switch may also vary depending on target travel direction.
- Bolt switch must be installed so that the target stops in front of the sensor. It is possible to make an horizontal or vertical adjustment to regulate Bolt's sensibility.
- Do not install the switch near ferrous chips. This may cause the seizure of the fixing nuts. Clean the threads (A) from ferrous chips, dust, etc...before installing the switch. Avoid contact between target and switch.
- Bolt switches are provided with M20x1,5 threaded connection.
- Before installing Bolt switches make sure that the thread of the entries are free from cover coated materials (paints, Teflon, etc...).
- The plug supplied with the proximity switch is for transit purposes only. IP6X protection depends on cable gland and cabling methods used. Use cable gland with protection level Ex "e", Ex d or Ex "tb" and IP66/68 assuring that it is provided with o-ring or flat gasket able to be suitably compressed between the cable gland and the cover of the equipment.

2 ELECTRICAL WIRING

- Loosen the ring nut and remove the bolt cover.
- Remove protection plug from cover entry and substitute it with cable gland suitable for type of protection required; the selected cable gland shall have an operating temperature included in the range defined by the minimum ambient temperature of the device and the maximum ambient temperature of the device increased by 7°C. **Maintenance:** at the specified maintenance intervals it is recommended to check the compression fittings and tighten as necessary.

Bolt Switch

Installation & Operating Manual

Intrinsically safe/dust tight

Code: 2058044	Rev: 1-0	BOLT BMC41A
--------------------------------	---------------------------	------------------------------

SPECIFICATIONS							
SENSING DISTANCE	Switch	Direction A [Values in mm]		Direction B [Values in mm]			
				Target distance: 2mm		Target distance: 1mm	
	Magnetic target	PI: 3,6	DO: 6	PI: 4	DO: 5	PI: 4,5	DO: 7
FREQUENCY RANGE	Magnetic target	Max 100 Hz					
RESPONSE TIME	Magnetic target	2 ms					
Notes: * PI: Is the point where the switch first operates. * DO: Is the point where the switch is released. * PI & DO values refers to the distance between the 2 axis of BOLT switch and target. *Target distance refers to the distance between the 2 opposite faces of BOLT switch and target. * BMC41 switch is supplied with its standard magnetic target. 2058044

2.3 Connect the terminal strip according to the wiring diagram on the label of Bolt. The minimum cross-sectional area related to the types of protection and rating are summarized below:

Type of protection	Current	Minimum cross-sectional area required for the field wiring
Ex ia	Ii = 100 mA	AWG26 (0.14 mm²)
Ex tb	I _{max} =1 A	AWG18 (0.823 mm²)

- Cable characteristics shall comply with the requirements included in the standard 60079-14.
- The device must be grounded using ground terminal and as indicated in 11). The conductor used for the internal wiring shall have the same cross sectional area of the conductors connected to the reed switch.
 - Replace the cover and screw the ring nut. **WARNING:** check seal is properly fitted in slot.

3 PRODUCT'S STORAGE

- Keep the boxes away from UV rays and atmospheric agents, in an environment with temperature between 0°C and 40°C.

Pour éviter des blessures graves ou mortelles ou des dommages matériels importants, veuillez lire et suivre toutes les instructions de sécurité de ce manuel. Si vous avez besoin d'instructions supplémentaires, veuillez contacter Rotork Instruments Italy.

VEUILLEZ CONSERVER CES INSTRUCTIONS

⚠ AVERTISSEMENT:
Ne pas ouvrir dans une atmosphère explosive gaz/poussière. Ne pas ouvrir lorsque l'appareil est sous tension.

Consignes de sécurité pour l'installation en zone dangereuse:

Numéro de modèle couvert : détecteur de proximité de la série SOLDO® BMC41A.

Le détecteur de proximité BMC41 est un capteur de proximité magnétique, adapté à tout type d'indication de position dans les applications industrielles.

Projeté et fabriqué selon la directive ATEX 2014/34/UE avec la réglementation sur les atmosphères potentiellement explosives de 2016 (S.I. 2016/1107) en référence aux normes EN IEC/CEI 60079-0 : 2018, EN 60079-11: 2012, EN 60079-31 : 2014 et aux normes associées IEC/CEI 60079-0 : 2017, IEC/CEI 60079-11 : 2011 et IEC/CEI 60079-31 : 2013.

Les instructions suivantes s'appliquent aux équipements couverts par le numéro de certificat ATEX: EPT 21 ATEX 4617 X, le numéro de certificat IECEx: IECEx EUT 21.0007X et UKEx – Type de certificat d'examen CML 22UKEX2687X

- ⚠ ATTENTION:**
- Le détecteur de proximité SOLDO® de la série BMC41A peut être utilisé dans une zone dangereuse avec des gaz inflammables, vapeurs, poussières et brumes, groupe IIC, IIIC et mode de protection Ex i et/ou dans une zone dangereuse avec poussières inflammables et brumes, groupe IIIC et mode de protection Ex tb avec classes de température T4, T5, T6 et températures de surface maximales T85°C, T100°C, T135°C.
 - L'appareil peut être marqué selon le type de protection à sécurité intrinsèque (GAZ et POUSSIÈRE) ou bien selon le type de protection étanche à la poussière (POUSSIÈRE), les marquages sont expliqués à la page 8.
 - Un personnel qualifié doit effectuer l'installation conformément au code de bonnes pratiques applicable.
 - L'utilisateur ne doit pas réparer cet équipement.
 - Si l'équipement est susceptible d'entrer en contact avec des substances agressives, il est de la responsabilité de l'utilisateur de prendre les précautions nécessaires pour empêcher que l'équipement ne soit affecté et que le type de protection ne soit compromis. **Substances agressives** : par exemple les acides, les liquides, les gaz peuvent affecter l'enveloppe métallique.
 - Pour une température ambiante inférieure à -10 °C et supérieure à 70 °C, veuillez utiliser un câblage adapté à la fois aux températures ambiantes minimales et maximales. Utilisez un câblage avec une température de fonctionnement supérieure de 7 ° à la température ambiante.
 - L'utilisateur doit garantir le maintien des caractéristiques de sécurité de l'appareil après la maintenance.
 - Une barrière de sécurité doit être connectée uniquement à un circuit. Ainsi, le contact de fin de course unipolaire bidirectionnel (SPDT) doit être connecté soit normalement fermé, soit normalement ouvert, afin d'éviter que deux barrières de sécurité ne soient connectées au même pôle commun.
 - L'utilisateur doit avoir un système adapté pour limiter la chaleur provenant de la vane. N'installez pas l'équipement près d'une source de chaleur ou de refroidissement qui pourrait affecter la température de service.
 - Des précautions particulières doivent être prises pour éviter les contraintes mécaniques telles que les charges appliquées ou les impacts.
